

Use-Case Flow Specification

Problem Statement #33 — Micro-Lending & Peer Credit Risk Assessor

Name – Prateek Hachadad

SRN – PESIUG24CS340

Section – F

Use case	Submit Loan Request
Primary actor	Borrower
Secondary actors	System (risk engine), Peer Lender (indirectly, as request consumer)
Preconditions	Borrower is registered and logged in; borrower has completed a KYC profile including income, employment status, and existing debt obligations.
Postconditions	A loan request exists in the system with an assigned risk tier (Low/Medium/High) and is visible to peer lenders in the marketplace.

Main success scenario

1. Borrower selects "Apply for Loan" from the platform menu.
2. System displays a form requesting loan amount, purpose, and tenure.
3. Borrower enters the requested details and submits the form.
4. System validates that the borrower's financial profile is complete (income, employment, existing debt).
5. System invokes «include» Compute Risk Rating, using debt-to-income ratio, repayment history, and employment stability indicators.
6. System assigns a risk tier (Low/Medium/High) to the loan request.
7. System publishes the loan request to the peer lender marketplace.
8. Borrower receives a confirmation notification that the request is live.
9. Use case ends successfully.

Alternate flow — 4a. Incomplete financial profile

- 4a1. System detects that a required field (e.g., employment information) is missing from the profile.
- 4a2. System displays an error message and blocks submission of the loan request.
- 4a3. Borrower completes the missing profile information and resubmits the request (flow returns to step 3).

Note: This flow satisfies FR-001's acceptance criterion that an incomplete financial profile must never generate an approval.
